Building a DApp - Extra Credit

Name: Varshith Thota Student ID: 16335401

The assignment is about building a Decentralized Application that aims to transfer digital tokens such as Ethers from one wallet to another.

The DApp built for this assignment is <u>fully functional</u>. The user can connect their decentralized wallet such as Metamask or Brave Wallet and access the application.

It is deployed at: https://sendeth-dapp.vercel.app/

Steps:

- a. Click on "Connect to Wallet" button
- b. Sign the Metamask confirmation
- c. input the recipient's address
- d. input the amount of digital tokens being send
- e. Click "Send"
- f. Confirm the Metamask confirmation for initiating transaction

1. Running the server

```
PROBLEMS OUTPUT DEBUG CONSOLE TERMINAL

Varsh@v4rsh1th MINGW64 ~/web-dev/sendeth-dapp/frontend (master)

$ npm run start

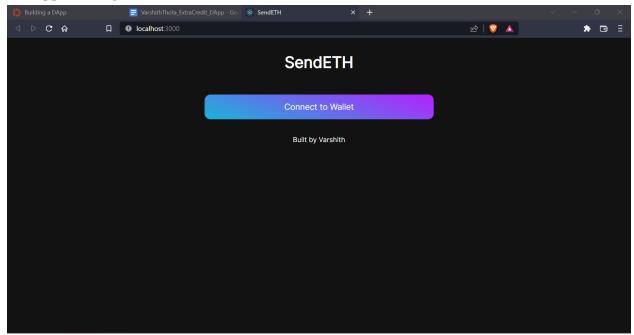

> frontend@0.1.0 start

> react-scripts start

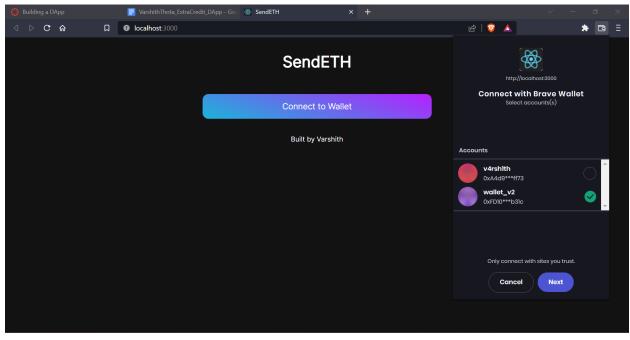

[]

Ln 52, Col 4 Spaces: 2 UTF-8 CRLF {} JavaScript R Q
```

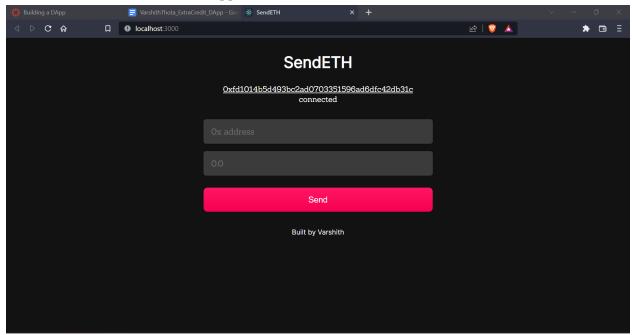

2. DApp running...

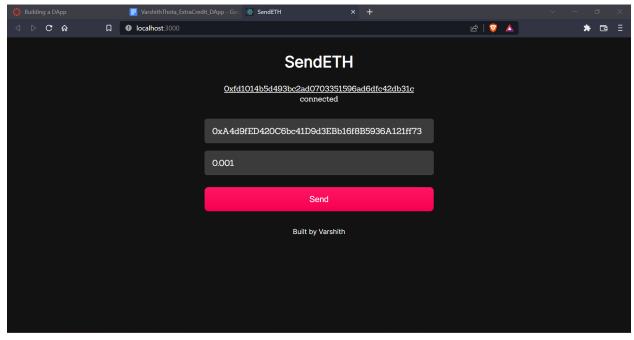

3. Click on the "Connect to Wallet" button and accept the confirmation

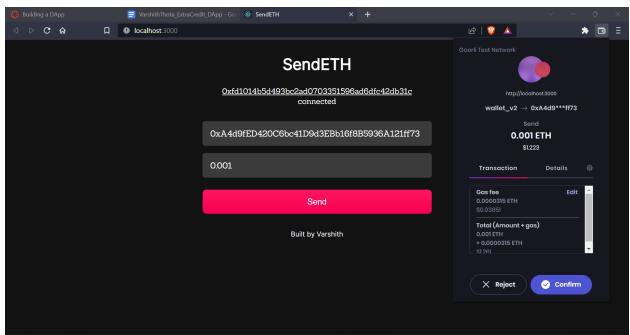

4. Wallet is connected to the DApp

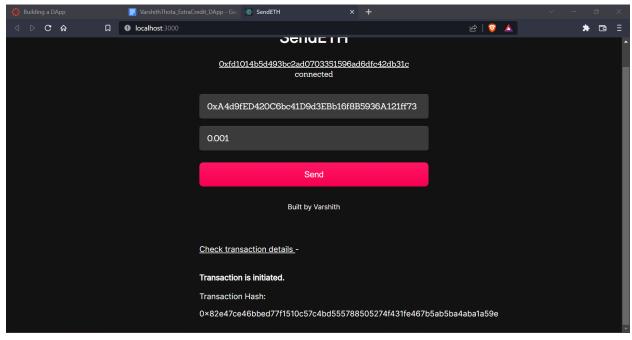

5. Input the recipient's address and the amount of tokens, Hit "Send"

6. Confirm the transaction in the wallet

7. The transaction gets initiated by generating a unique transaction hash

8. Check the transaction status on a block explorer like Etherscan
